Career Profile

NOTE: Please specify the name(s) of a hospital(s) where you'd been trained and have practised medicine, described the training course(s) and your practice as a medical doctor. The name of a current workplace(hospital) and your position at the hospital should be stated clearly.

I have been studied at State Medical University of Mongolia from 1990-1996. In that time I have activity on surgery field and joined 3 years at "Pediatric surgery student's club". After the graduation I started to work at National Center for Maternal and Child Health as a general physician. Directly I have been trained for pediatric surgery residency program at State Medical University of Mongolia. Since the graduation of residency I have continued my job, as a pediatric surgeon. I have completed the first degree of surgeon in 2002, and senior degree of surgeon in 2006.

Self-introduction

Since 1996, I have been working as a pediatric surgeon in the department of Pediatric General Surgery. Annually I do over 200 elective surgery such as: laparotomy to close bowel fistula, PSARP, esophagocoloplasty, cholecystectomy and some bone surgery. Every month I do night-duty 6-8 times. On the duty I give the consultation for child who came to have the emergency surgery consultation. Annually I do more than 150 emergency surgery such as: Appendectomy, Laparotomy for peritonitis or for bowel obstruction and osteoperforation for acute osteomyelitis. Also I go to the rural site for emergency call and give the consultation and do the surgery on-site. Recently I take more attention for laparoscopic and bone surgery. I would like to improve my surgical experience and would like to study new skills of surgery and diagnostic methods.

Study Plan (Specify the fields of study while staying in Korea)

If I get the chance to study in Korea I will take more attention for 3 major subspecialty of surgery: Laparoscopic surgery, "Hepatic and biliary tract" surgery and "bone and joint" surgery.

I week: will have orientation, and will compare ordinary works, what is the difference between two hospitals.

I, II month: Laparoscopic surgery. Right now we don't (have) do the laparoscopic surgery, what ever we plan to invent this field soon. So I would like to prepare for it. I will concern what is the benefits and disadvantages, emergency problems during the surgery, to solve this.

III, IV month: Hepatic and biliary tract surgery. By the year case of malformation of biliary tract such as: biliary atresia and cyst-malformation is increasing. We need to improve surgical skills, early diagnostic methods and patient care before and after surgery, because we can't get enough good results even we do the operation.

V: VI month: Bone and joint surgery. Also we have the patients who has congenital hip dislocation and other bone problems. We need to do reconstructive surgery for patients who has osteodeformation.
